

Workday and Microsoft Integration

Active Directory Process
(Occurs on each campus independently)

DRAFT

- **NOTE:** Only writing back primary work email address into Workday Tenant from Azure Active Directory
- **GOAL:** To allow Business to Business (B2B) Guest invitations to be auto accepted by participating .edu domains within UA System
- **GOAL:** To create UASYS.edu domain service accounts for participating .edu domains within UA System so campus can initiate, send and maintain their own B2B Guest invitations to the UASYS.edu domain.
- **NOTE:** Each campus will have to provision tenant-specific non-gallery applications for Workday SSO. These applications will point directly to the UASYS.edu official Workday SSO app.
